SYSTEM SPORTFLOOR-EX FAST

Total Thickness 1,2mm

Outdoor resilient acrylic sports flooring system ideal for tennis, basketball, volleyball, handball, football courts, as well as any other outdoor sports courts.

Combination of wet-pour acrylic coatings in total average thickness of 1.2mm.

Classified system by the International Tennis Federation (I.T.F) - Class 5.

Steps

1. **RITIVEX R LIQUID 1102 - Acrylic primer.** Used as primer of acrylic coatings, such as **ELASTOSPORT 853, SUPER ELASTOCOAT 842, ELASTOTURF 851 or ELASTOMARK 818.** Applied by airless sprayer or brush.
2. **ELASTOSPORT 853-COLORED - Acrylic, colored, one component, smoothing and repairing wet-pour resurfacer for sports flooring systems.** Consists of acrylic resins, quartz sand and special improver. It is applied by squeegee on smooth, compact road-grade asphalt, seals the porosity of the asphalt and in parallel smooths out the surface. Highly resistant to adverse weather conditions (snow, frost, heat waves etc.) after drying.
3. **ELASTOTURF TOP - Acrylic, special top coating for sports flooring systems.** One component, acrylic resin with easy application, which provides a safe and high-quality game. Applied by squeegee and short-haired mohair roller.

Preparation – Application

Applied only on dry asphalt and concrete surfaces (over 30 days old from date of placement) without rising humidity issues and free of materials that might prevent bonding e.g. dust, loose particles, grease etc. The success in the application depends on the right preparation of the underlay and use of the material.

- **Good, dry** cleaning of the surface from dust and residues with vacuum cleaner and squeegees.

- Priming of the surface with priming acrylic resin **RITIVEX R LIQUID 1102** for the proper adhesion on the sub-floor. Application of one or more layers until the surface is saturated with airless sprayer or brush. Avoid the creation of puddles of the material. Consumption: 150-200gr/m² depending on the absorption of the underlay.
- When the primer is dry (approximately 1 hour depending on the ambient temperature), follows the application of **ELASTOSPORT 853 COLORED**, after adding silica sand in granulometry of 0.3-0.5mm. Proportions in weight 50% **ELASTOSPORT 853 COLORED** and 50% silica sand plus 4-6% up to 10% water in the mix.
ELASTOSPORT 853 COLORED is applied in two or three layers, depending on the desirable thickness and the roughness and absorbency of the surface. Each new layer is applied after the previous one has dried. Consumption: 2kg/m² for 2 layers.
- As soon as the acrylic pore filler dries (5-6 hours at 25°C), follows the application of **ELASTOTURF TOP in one or two crossing layers**.
- Depending on the ambient temperature **ELASTOTURF TOP** is diluted with up to 10% water (per weight), prior to application, to achieve better fluidity. It is applied in one or two coatings by squeegee depending on the desired effect. The next layer follows the other after the previous is dry. Consumption: 0,30 kg/m² (one layer) or 0,60 kg/m²/mm (two layers).

Important Remarks

- ✓ In case of very rough and sharp cement or asphalt surfaces it is recommended to grind the surface with a mosaic or milling machine, and sandblast before the application of **ELASTOSPORT 853 COLORED**.
- ✓ **ELASTOTURF TOP** should not be applied in more than 0,30 kg/m² per layer. In case of high temperature during summer, layers with more consumption than 0,30 kg/m² per layer should be avoided because the material may crack due to the rapid evaporation of water. Additional thickness is achieved only by repeated layers.
- ✓ During temperatures over 40 degrees, ideal time for the application of **SPORTFLOOR-EX FAST SYSTEM** is between 22:00 and 09:00 and the minimum temperature during application and drying should be over 10°C.
- ✓ The freshly coated surface should be protected from high temperatures, wind, rain and frost for at least the first 24 hours.
- ✓ In case it gets damaged, it is simply repaired and recoated on the spot.

Substrate

Asphalt is the safer subfloor for sport floorings for sure and must be always preferred than concrete surfaces.

A. Asphalt Substrate

The asphalt must have a slope of 0.7-1% and must dry for at least 30 days so that all solvents from the asphalt can evaporate.

The asphalt sub-floor should be applied on well compacted 150mm road base sub-floor and asphalt should be laid in one layer (and not 2) in 6 to 8cm with fine and coarse aggregates (up to 15mm granulometry) like the kind of asphalt used in road construction.

So, new road-grade asphalt will have to be laid (minimum 60mm) in one layer containing coarse aggregates and then mature for 30 days at least, before any application takes place on top of the asphalt to avoid bubbles on the final layer of the sport or rubber floorings.

Asphalt Infrastructure

B. Concrete Surface

Concrete surface must be power-trowelled without cracks and must be smooth with a slope of 0.7-1% and humidity under 4% in 10cm depth of concrete.

Concrete must also be **dry at least for 40 days** and then the application takes place if there is no rising humidity for the sub-floor. Before the application takes place, there must be proper grinding of the surface by a grinding machine to open the pores accordingly and also a measurement by special instrument to measure humidity on the surface and in 10cm under the surface.

Generally concrete is a risky sub-floor and there may be problems with rising humidity, especially in areas where the sea level is really high and when the sea is close or in areas near greenery.

Always make expansion joints in large areas of concrete, in order to avoid uncontrollable cracks and failures. Joints should be every 25 square meters creating a grid of 5x5 meters or close to that.

Substrate requirements

Concrete quality	at least C20/25
Age:	at least 40 days
Moisture content:	below 4%

Tools: For the application of the system you will need: squeegee, roller and/or airless sprayer, brush.

CLEANING AND MAINTENANCE MANUAL FOR :

-OUTDOOR SPORTS FLOORING

-PLAYGROUND FLOORINGS

Introduction

Outdoor sports floorings and playground surfaces are made of extremely durable polymers, designed to withstand extreme climate conditions and intense use. However for the best maintenance of the sports surface a regular check (once in 6 months) is required and the maintenance of the surface is necessary to preserve the suitability and functionality of the flooring.

The installer's guarantee will usually be conditional on the recommended maintenance requirements being carried out with due diligence.

Maintenance

Maintenance procedures are necessary to preserve the lifetime of the surface and to ensure that:

- The Surface is kept clean.
- The Surface is safe for intense and diverse use.

These objectives are achieved by :

- Sweeping/removing leaves and other debris from the surface.
- Regularly washing the surface with a soft brush to remove contaminants such as grime, grease, algae, moss, sand etc.
- Applying suitable treatments of moss-killer and/or algaecide
- Periodically removing weed growth from the perimeter kerb lines.

Maintenance Equipment

- Leaves, pine needles and other detritus should be removed from the surface immediately as rot quickly helping the growth of mold and moss.
- A mechanical leaf-sweeper or vacuum cleaner is ideal for removing vegetable matter and dirt. Restricted areas may have to be cleaned by hand.
- The maintenance equipment should be well maintained and carefully operated to avoid any physical damage to the surface.
- Pressure loads on the surface as well as friction and shearing loads have to be avoided to prevent damage to the surface.
- At least once a year it is advisable to wash the surface with **low-pressure** jetting apparatus.

- Polymeric surfaces can withstand low pressures without suffering damage.
- Note that no aggressive chemical cleaning agents (chlorine or acid-based) should be used.

Prevention of damages

To ensure the excellent condition of the surface:

- It is forbidden to drive vehicles, bicycles or motorcycles on the surface.
- Chemicals, oils, fuels or solvents on the surface are prohibited.
- Fireworks or cigarettes or unsuitable shoes on the surface are prohibited.

Damages and renovation

The lifetime of an outdoor sports/playground surface depends on its quality, usage and level of maintenance. In general a normal outdoor sports/playground surface used intensively will last 7 to 12 years (depending on the system) before renovation is required. Renovation should be carried out periodically to prevent the total damage of the surface, which would necessitate complete renewal.

Renovation must be carried out by professional and skilled contractors with thorough knowledge of this type of work.

There are different procedures for the renovation of a surface:

- Complete renewal by replacing the worn-out surface with a new sports flooring system.
- Re-topping or sealing with adequate polyurethane or acrylic materials.
- Partial re-topping in particular worn-out areas.

Information contained in this document is of general nature and is given in good faith. As the state of the surface and the use and application of the various cleaning products, is out of our control, our advice for individual cases, verbal, written or based on tests, does not exempt the applicator from the testing the suitability of the cleaning products and their applications.
